Blackboard collaborate™

Blackboard Collaborate™ Publish

21st Century students learn differently, and 21st Century educators need the tools to reach them. Blackboard Collaborate is leading the way with support for the entire online instructional cycle—what happens BEFORE, DURING, and AFTER your real-time, session.

Engage More People in More Ways

That's what teaching and learning in the 21st Century is all about. Now you can create portable, reusable learning content in just seconds—with Blackboard Collaborate Publish. It's the affordable, easy way to make the most of your recorded Blackboard Collaborate web conferencing sessions.

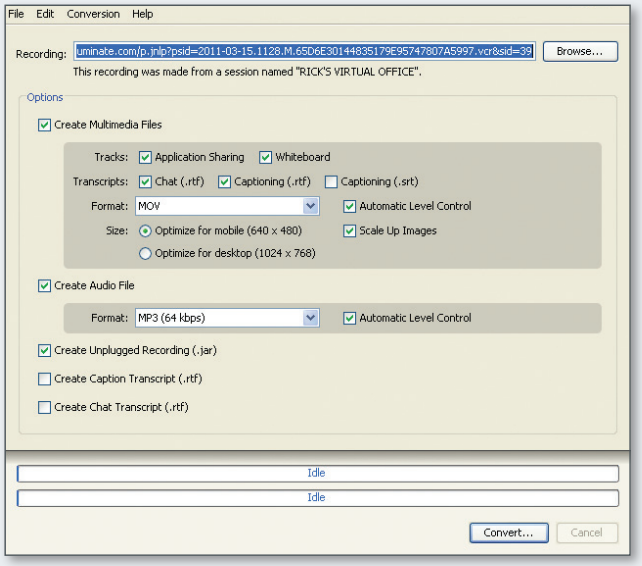
Keep today's "digital natives" actively involved in learning with high-definition video podcasts. Create standalone multimedia recordings you can view even when not connected to the Internet. Store Publish recordings in your learning management system or on your website or portal. Send out via email or distribute on CD.

What does Publish do?

Leverage any Blackboard Collaborate web conferencing recording by creating portable, reusable learning content. With Publish you can create a standalone multimedia recording that preserves interactivity or a video file in a wide variety of industry-standard formats: AVI, FLV, MP3, standard MP4, high-definition MP4 (H.264), OGG VORBIS, WAV, and WMV. The choice is yours.

Video Podcaster

Your students are always on the go. Now they can catch a missed lecture on a tablet PC or smart phone whenever they want. Convert Blackboard Collaborate web conferencing session recordings to rich video podcasts that capture shared applications, whiteboard content, chat transcripts, closed captioning, and all audio, including telephony. View these interactive recordings on popular portable devices without being connected to Blackboard Collaborate.



Blackboard Collaborate Unplugged Recordings

What about when you're not connected to the Internet? You can still experience the rich interactivity of a Blackboard Collaborate web conferencing recording in its native format. Blackboard Collaborate Unplugged recordings maintain all the interactive features of the live session, like saving and printing whiteboard and chat, saving transferred files, and viewing user profiles. Create standalone recordings to post to a web server, send via email, or distribute on CD-ROM. Anyone can view the recording on a desktop computer or laptop—without ever having been in a Blackboard Collaborate web conferencing session.

Why is Publish the clear choice for educators?

- **Meet needs of mobile students with anywhere, anytime viewing**
- **Facilitate on-demand, self-service, and informal learning**
- **Leverage content of Blackboard Collaborate web conferencing session recordings**
- **Create high-definition video files or standalone recordings**
- **View content even when not connected to Internet**
- **Store video files on your own hard drive or post on web server**
- **Distribute recordings by email or on CD**
- **Reuse closed captioning created during live session**

The Blackboard Collaborate Platform

Publish is a key component of the Blackboard Collaborate Platform. Also included is Blackboard Collaborate web conferencing for real-time interaction and collaboration and Blackboard Collaborate™ Plan for packaging content, outlines, and activities before your live session. Now you can plan, present, record, and publish—all with Blackboard Collaborate!
