What's New Course Delivery GUI Administration Online Training

Release 9.1 SP 8 to SP14

Course Overview

This self-paced online course provides you with the information necessary to update your skills on the latest features in Blackboard Learn™ for Course Delivery in the graphical user interface (GUI). Through content and assessments, you will have an opportunity to review the new features, practice their application, and consider how they may be applicable in your environment. Throughout the course, we provide explanation about how the feature may impact you and why you may want to consider adjusting your settings accordingly.

Please note that in order to take this course, each person will need System Administrator Access to his or her institution's Blackboard Learn platform.

Certification

The Course Delivery GUI Administrator Recertification component is applicable for those who have previously completed the Course Delivery GUI Administration Certification course. Upon completion of the course with an 80% or better average on the quiz, you will receive an updated certificate verifying that you have demonstrated mastery of the identified competencies. It is recommended that those who took the GUI Administrator Certification course prior to Release 9.0 take the entire certification course again, as this course is only going to review the latest service pack features.

Course Topics
