

# AT3000 Activity Reader

**Blackboard**  
transact™

## THE BLACKBOARD ACTIVITY READER

The Blackboard AT3000 Activity Reader is a versatile device that combines the acceptance of activity and payment transactions in one convenient IP-enabled terminal. The AT3000 is an economical terminal that supports multiple tendering methods including point-based meal plans, credit/debit via a flexible spending account, cash transactions with an optional cash drawer, as well as a wide range of activities including voting, legal age verification and event access privilege.

### Product Features:

- Communicates via encrypted IP or RS-485/RS-232
- Stored value payments, freeze account, and balance check functions supported
- Supports two printer models: Ithaca (MW/RJP6) or the Axiohm (PRT/TAX794).
- Tip line functionality for stored value transactions
- Displays balance, account warnings, and other messages after transactions
- Includes adjustable backlight display visible in all light conditions
- Graphics display supports 8 lines X 21 characters of text
- Adjustable volume control
- Mounts easily on an adjacent wall with mounting bracket
- Device configuration allowed through the keypad, CONFIG port, or telnet
- Stores up to 14,000 offline transactions
- Receipt options include on-demand and duplicate printing
- Supports a cash drawer
- Login PIN required for added security

The AT3000 supports up to 5 configurable tender keys. Tender methods may include stored value, activity (y/n), event access, count or board plans, or cash.
