

What's New Academic Collaboration GUI Administration Online Training

Release 9.1 SP 8 to SP14

Course Overview

This self-paced online course provides you with the information necessary to update your skills on the latest features in Blackboard Learn™ for Course Delivery, Community Engagement, and Content Management in the graphical user interface (GUI). Through content and assessments, you will have an opportunity to review the new features, practice their application, and consider how they may be applicable in your environment. Throughout the course, we provide explanation about how the feature may impact you and why you may want to consider adjusting your settings accordingly.

Please note that in order to take this course, each person will need System Administrator Access to his or her institution's Blackboard Learn platform.

Certification

The *Academic Collaboration GUI Administrator Recertification* component is applicable for those who have previously completed the Course Delivery GUI Administrator Certification, Community Engagement GUI Administrator Certification, and Content Management GUI Administrator Certification courses. Upon completion of the course, with an 80% or better average of quizzes, you will receive an updated certificate verifying that you have demonstrated mastery of the identified competencies.

It is recommended that those who took the Administrator Certification courses prior to Release 9.0 take those certification courses again, as this course is only going to review the latest service pack features.
