

The Learning.com Building Block

Learning.com and Blackboard, thought-leaders in the education market, have joined forces to bring your students the best digital education tools available anywhere. The Building Block gives you access to Learning.com's single sign-on content portal that allows educators to find, manage, and use over 350,000 learning objects. It delivers a wealth of standards-aligned resources in one user-friendly solution — free and fee-based content, plus resources that your district has licensed that you might not even know about.

High Quality Content, Premier Providers, Endless Possibilities

The Learning.com Building Block is your pathway to a growing collective of premier providers like NASA, Smithsonian, Waterford Institute, Professor Garfield, and over 15,000 shared user-generated learning objects created and reviewed by fellow educators. You'll find standards-aligned content across critical areas, including language arts, library media, mathematics, science, technology, and professional development. Whether it's Intel Education, PhET, USA TODAY, the American Museum of Natural History, or a brilliant activity designed by a peer, the Learning.com Content Portal empowers you with the right online digital learning content you need to give your students a more robust education.

Find and Use Exactly What You Need to Succeed

We know it's not enough to provide educators with thousands of digital learning objects, which is why the Learning.com Building Block also allows you to easily find, manage, and use those resources in a variety of ways. Browse content by provider, standard, subject, or type. Search by keyword, or filter by grade level. Seamlessly assign materials directly into your Blackboard course. We put you in control, with the means to locate, assign, and use the best resources available.

"The majority of third party content we incorporate in courses requires students or participants to log in with various usernames and passwords which causes a great deal of confusion and frustration. The Learning.com Building Block will alleviate this issue creating a seamless integration of resources from licensed and free providers. While large K-12 districts may have IT staff to handle single sign-on product integration, districts of our size simply don't have the staff. Learning.com has taken this workload off districts and now K-12 teachers across the country will benefit."

— Alisa Jones,
Supervisor of Instructional Resources, Clay Virtual Academy
