

Additional Functionality with Integrated Solutions Editions of TruCredential Software

Pre-built Smart Card Configurations

Pre-built configurations for smart card issuance are available and easy to set up through the user interface.

TruCredential Features

Works with the Latest Technology

All editions of TruCredential software work with the latest technology, including Windows 10 and Microsoft Edge.

Part of a Complete Solution

TruCredential software is engineered to work as part of an integrated system with Datacard printers, supplies and support.

Design, Issue & Manage Student Credentials

The Datacard® TruCredential Blackboard edition software suite is an easy solution for creating, issuing and managing student IDs and credentials. It empowers institutions to meet a wide range of application requirements, from basic photo IDs to high-assurance credentials. With the TruCredential suite, you can easily scale from a single workstation or user to a multi-workstation application with more functionality.

Great User Experience

Setting up card designs and printing them has never been easier. An intuitive step-by-step workflow makes issuing cards fast and simple. The software features effortless drag-and-drop functionality and the ability to customize the process to fit your needs.

Out-of-the-Box Integration

Easily integrate TruCredential software and your Blackboard Transaction System with this out-of-the-box solution designed for quick and frictionless integration.

Configurable

Our configurable system allows you to create custom workflows for your operators. Operators can then work independently with these established templates and process flows. You can also create unique user profiles to enhance the security of your program and give appropriate access to the right people.

Technology That Grows with Your Institution

One technology platform can address both basic card issuance and integrated solution segment needs. A future-ready technology supports your features as your needs grow.

Key Advantages of TruCredential Integrated Solutions

Integration of TruCredential software allows large institutions to easily deploy and manage their credentialing program across a network of work stations.

Centrally Install & Deploy Across the Network

Install and license TruCredential software on one server and deploy it across your entire network without the need for a physical dongle.

Manage all of Your Data From One Central Server

Collect and manage data from all of your satellite devices on one central server.

Manage All Users From One Central Location

Role-based access control restricts, and grants users access to specific functions. Password reset for users is self-service.
