A better user experience by Blackboard Open LMS

A new approach to the user interface
Snap’s cleaner and streamlined interface makes Blackboard Open LMS easier to navigate and use and gives organizations more flexibility in creating a custom look and feel. Based on Moodle 2.6’s Bootstrap 3 responsive theme engine, Snap provides a consistent user experience across any device (smart phones, tablets, computers) and operating system.

Content is KING
At its core, Snap improves the instructor and learner experience in the LMS by engaging the user in the content on the page. The typical course “clutter” created by less frequently used blocks and modules is tucked away to create a cleaner and more focused content experience.

Revamped user profile
Snap’s new user profile puts all of a user’s important info (courses, messages, alerts, etc.) in one place. Now, users can stay organized and get a higher level view of their coursework in fewer clicks and headache than before.
Cleaner look and feel for popular features/functions
Snap has impacted every aspect of the user experience, including individual features and functions, such as reporting and grading. Even popular Open LMS-specific features such as Open Grader (pictured) and the Personalized Learning Designer are simpler and more focused.

Save time with search
Tired of relying on breadcrumbs and your browser’s back button? Snap’s new search feature lets users jump to specific courses, topics, assignments, activities, or resources whenever they need so they can finish what’s required and get to more important matters.

A more enjoyable teaching and learning experience for everyone
Inside and out, Snap gives Blackboard Open LMS new life and makes it a delight to use and explore. Even more routine navigation, like selecting course weeks/topics (pictured) are made more aesthetically pleasing.
